RESULTS FROM USING ECOHANCER™ AT A RESTAURANT IN SOUTHAMPTON, NJ

100% NATURAL WAY TO ENHANCE SEPTIC SYSTEM PERFORMANCE

ECOHANCER™ IS NOT A BACTERIA BASED ADDITIVE:

A properly operating septic system contains all of the bacteria that it will ever need. If something is killing or harming the naturally occurring bacteria, it will also kill or harm bacteria contained in enzyme or bacterial additives.

ECOHANCER™ IS AN ORGANIC FOOD SOURCE FOR NATURALLY OCCURRING BACTERIA:

EcoHancer is made from Peat and is 100% organic. Rather than trying to circumvent a lack of naturally occurring bacteria, EcoHancer provides an environment that causes those existing bacteria to multiply more rapidly and become more active. The end result is a microbial population that will thrive and consume organic waste more rapidly.

ECOHANCER™ DOES NOT MAKE CLAIMS TO REDUCE OR ELIMINATE PUMPING:

EcoHancer will clarify the liquid leaving your septic tank; something that pumping alone will not achieve. Routine pumping is always required to remove solids from the septic tank.

Enjoy peace of mind with

EcoHancer's performance is supported by university studies and real world applications. The peat extract at the core of EcoHancer is also used by many public and private utilities throughout the United States.

EcoHancer is only available through qualified wastewater professionals. Please contact your local service provider for more information, or contact Greenovative Technologies directly for a provider in your area.
