# Septic System Inspections

Realty Transfer Septic System Inspections must include an evaluation of the drainage area and all system components; A hydraulic loading test of the system for homes vacant for 7 days or more; Pumping of the septic tank to verify the integrity and verification that all household wastes are directed into the septic tank; Examination of the drain field *and* required when practical, the opening of all tanks and distribution boxes. (Ask about Cesspool exemptions for Real Estate Transfers.) When possible, acquisition of septic design records is important, only experienced & certified technicians should perform your inspection. Dye tests and surface checks aren't sufficient alone to certify a system as operable. Ask the inspection company what they include before you hire them to avoid back end charges. The English report provides system details and limited diagnosis of any faults found, along with repair options.

# Septic System Repair

The construction or operation of a septic system is governed by "The Standard for Individual Subsurface Sewerage Disposal Systems," N.J.A.C. 7:9A1. It is illegal in New Jersey to construct, alter or repair a septic system without a proper permit. Penalties for violations can be up to \$50,000 per day. Remember that any repair requiring excavation also requires "New Jersey One Call" to identify buried utilities. "One Call" must be contacted before digging by calling (800) 272-1000. If you are unsure whether a specific activity requires a permit, you can contact the local Health Department. The County Health Department is the local authority in matters pertaining to septic system repair and replacement. Each authority may allow slightly different repair activities.

A few numbers are listed on the back for your convenience. HICL #00181200.
